

Sai Praneeth

SOFTWARE DEVELOPMENT ENGINEER

☎ (+91) 8309571609 | ✉ c.saipraneeth888@gmail.com | 🐼 mrMadFox | 🌐 Sai Praneeth

Skills

Languages

Python, NodeJS, TypeScript, GO, JAVA

Tools/Frameworks

AWS, Docker, Redis, MongoDB, Kafka, Confluent, Gin, Flask, FastAPI, Django, Spring Boot, Nest, Express, PyTest, Selenium, Mocha, Sentry, Grafana, Linux

Experience

Slice

Bangalore, KA

SENIOR SOFTWARE DEVELOPMENT ENGINEER

May 22 - Present

- Built DaaS(Data as a Service) that manages and serves data across multiple organizations while ensuring security and auditing measures are in place, This reduces TAT from 3mandays to under 5mins. It supports postgres, mysql, DBX warehouse, async warehouse queries(on emr using airflow) datasources.
- Built UPI SWITCH in collaboration with five-member team, Led the migration process from Juspay Switch to an in-house solution, As a upi first company this helped us delevering UPI features fastest to our customers and reduced our cost and dependency with juspay.
- Built Sanction Screening Service that scrapes and enables search functionality on public lists of sanctioned individuals, ensuring compliance by preventing the onboarding of sanctioned persons.
- Built v1 version of Avatar service that generates personalised avatars in real-time based on a user image.
- Built NameMatch service that compares names from multiple sources to identify potential fraudsters.
- Refactored a legacy risk service that evaluates a user's purchasing power based on more than 100 factors.
- Increated Observability by Integrated Sentry, APM, Xray, SonarQube, Swagger, and pre-commit hooks accross multiple srevice.

Swiggy(SuprDaily)

Bangalore, KA

SOFTWARE DEVELOPMENT ENGINEER

Sep 21 - June 22

- Integrated algolia personalization to display items based on customer prior activity, This has increated CTA by more than 40%.
- Enhanced the pricing platform to eliminate pricing discrepancies across different pages within the same session.
- Developed several feature like best selling items based on every region are displayed to some customer, this will be dynamically updated as on when customers orders, This improved overall order rate by 25%.

Hyperverge Inc.

Bangalore, KA

SOFTWARE DEVELOPMENT ENGINEER

June 20 - Sep 21

- Improved overall throughput by 60% by splitting monolith into microservices.
- Used tools like sentry, opentelemetry as well as set up test environment to reduce 5xx error rates to almost zero.
- Developed polling machine learning models form s3 instead of committing to git, this has reduced effort of engineering team significantly.
- Developed an end to end service from scratch to blacklist devices, to block with multiple fraud attempts.
- Contributed and gained expertise in developing various components of document verification service, which analyzes and retrieves data. Built it from initial stages from defining the requirements to completion of deployment.
- Designed and developed end-to-end fully functional service which categorizes ID cards based on their quality into different buckets. Focused on various service aspects like scale and configurable design.

Hyperverge Inc.

Bangalore, KA

SOFTWARE DEVELOPMENT INTERN

Dec 19 - June 20

- Implemented an API to avoid data theft, by encrypting customer data to transfer them through various geographies, which is decrypted on the receiver's side.
- Developed a complete feature to mask user identification number, in national cards of various geographies. This has been made regional agnostic which generically solves the problem.
- Dockerised application which made deployment easy.
- Built an API which validates the user inputs with the data from the user uploaded ID card, this has been generalized to handle different kinds of information in the ID card. This helps customers avoid entering incorrect data.

Projects

AUTOMATICALLY CALLING NEARBY AMBULANCE SERVICE INCASE OF ACCIDENT

- Created a service which calls an ambulance in the event of an accident. Used Raspberry Pi, which retrieves the coordinates of the vehicle location and passes it to the server.
- Google Place API is used to retrieve the phone numbers of the ambulance services near to the accident location.
- Used SMS-Gatewayhub to message the coordinates of the accident location to the ambulance service providers, thereby bypassing the need for a phone call, Total TAT is less than a second.

GAMES DEVELOPED

- Created Snake, Pong, Bomber Man, Minesweeper games using Pygame(Python).
- Created endless-run game using unity in C-sharp.
- Developed a multiplayer shooting game that utilizes a UDP socket connection in Python and Pygame for the GUI. The game maintains its state on the client-side, which allows for the backend code to remain flexible and easily adaptable to multiple games.

TIMING ATTACKS ON RSA

- Analyzed how effective timing attacks can crack the key of RSA secured system.
- The analysis performed highlights the vulnerabilities of the RSA algorithm.

HOSTED A SITE - CHECKMETER

- Hosted a site using Flask. A custom link will be generated per user after signing up on this website. This link can be further forwarded to friends, in which they can enter data which is thereafter visible to the user.

STUDENT ATTENDANCE MANAGEMENT SYSTEM

- Developed student attendance management system using Node.js, HTML, CSS, and JavaScript to streamline and automate attendance tracking for educational institutions

Education

Vellore Institute Of Technology

B.TECH. | CGPA 8.13/10

Vellore

2016-2020

- **Relevant Courses:** Object Oriented Programming, Cyber Security, DBMS, Data Structures and Algorithms.
