Sai Praneeth

Experience

Oracle Cloud (OCI)

Aug 25 - Present

SENIOR SOFTWARE ENGINEER

- Designed, developed, and maintained OCI's customer-facing inter-region Network Performance Monitoring (NPM) solution, providing minute-level RTT visibility across **150+ regions** spanning multiple OCI realms.
- Worked on global network-telemetry pipeline processing **~10 billion metrics per minute** across ~100 regions, with delivery to customer monitoring systems in under **10 seconds**.
- Re-architected and migrated regional operations workloads from dedicated hosts to **serverless** infrastructure, eliminating host maintenance and reducing infrastructure costs.

Slice

June 22 - Aug 25

SENIOR SOFTWARE DEVELOPER

- Architected and implemented DaaS (Data as a Service) platform managing **10+ TB** data across organization, reducing data access TAT from **3 days to <5 min** while ensuring SOC2 compliance.
- Led development of in-house UPI PAYMENT SWITCH processing **5M+** daily UPI transactions.
- Owned the end-to-end deployment of a **multi-region on-premises HSM** (Hardware Security Module) solution for UPI MPIN management, ensuring high availability and disaster recovery.
- Engineered a memory-efficient UPI VPA blacklist feature using a bloom filter to enhance fraud prevention measures.
- Owned the end-to-end development of the Sanction Screening Service, preventing fraud by screening against **100+** global sanction lists.
- Built the first iteration of the Avatar service, enabling **real-time** generation of **personalised profile avatars** from user selfies.
- Reduced risk-assessment latency **10x**, from 20 seconds to under two seconds, across **100+ decision factors**.
- Designed and deployed an AWS **Lambda-based NameMatch** service that compared names across multiple sources, detected fraudulent patterns, resolved inconsistencies across services, and reduced customer onboarding errors by **10%**.
- Integrated Sentry, APM, and VictoriaMetrics for observability, enhancing monitoring and diagnostics.

Swiggy (SuprDaily)

Sep 21 - June 22

SOFTWARE ENGINEER

- Integrated with Algolia's personalization to customize item displays and ranking based on customer interaction history, resulting in a **40%+ increase in CTR**.
- Improved the pricing system to resolve price inconsistencies across various pages, enhancing user experience by maintaining **uniform pricing** throughout the app, through cross-functional collaboration with multiple teams.
- Implemented regional best-seller features with real-time SKU updates, resulting in **70%** of these items being added to carts.

HyperVerge

Dec 19 - Sep 21

SOFTWARE ENGINEER

- Led architectural transformation from **monolith to microservices**, resulting in **60%** throughput improvement through optimized service boundaries and inter-service communication.
- Containerized** application and implemented CI/CD pipelines, reducing deployment time from hours to minutes.
- Architected ML model deployment pipeline using S3 and versioning, decoupling model artifacts from application code and enabling seamless model updates without code changes.
- Owned the end-to-end design and development of a document verification service, including data processing, extraction and validation, handling **50+ RPS**.
- Engineered a solution for **ID card assessment and categorization**, facilitating the identification of card types and the application of suitable ML models for verification.
- Implemented **end-to-end encryption** system for secure cross-border data transfer using asymmetric encryption and key rotation.
- Engineered a region-agnostic PII masking solution to automatically obfuscate ID numbers on ID cards.

Skills

Languages

Java, Go, Python, Node, JavaScript, TypeScript

Frameworks

Spring Boot, Gin, FastAPI, Django, Flask, Express, Fastify, NestJS

Technologies & Tools

AWS, OCI, Docker, Kubernetes, PostgreSQL, MySQL, Redis, MongoDB, Elasticsearch, Spark Kafka, Git, Linux, Argo CD, Grafana, Prometheus, Terraform, Micrometer, VictoriaMetrics

Core Competencies

Distributed Systems, Microservices, Object-Oriented Design, Database Design, SQL, NoSQL
Data Structures & Algorithms, REST, gRPC

Education

Vellore Institute of Technology

B.Tech Computer Science | 8.14/10
